Predict! Risk Suite

Connecting risk across your organisation

Welcome to Predict! Risk Controller

For any organisation, having a complete picture of how you manage your risks is vital to a successful risk strategy. With Predict!, you get a comprehensive understanding of your organisations' risk exposure and the confidence to lead an impactful response through effective, engaging and integrated risk capability.
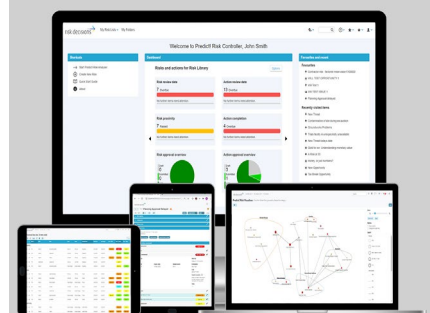

Predict! Risk Controller is the ISO 31000 compliant database that contains all of your risks including threats, issues and opportunities along with controls and actions. Predict! meets your risk management needs with a fully integrated system, including risk assessment, analysis, reporting and visualisation. It gives you the complete picture of how you are managing your risks and makes it easy
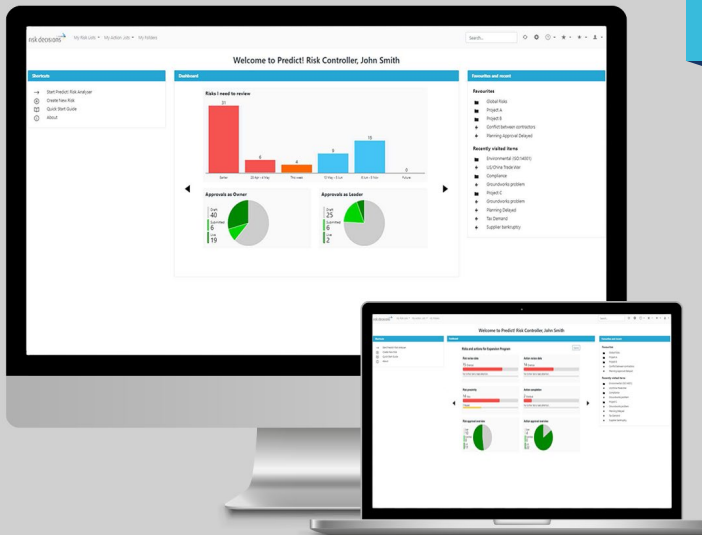

for everyone to keep those risks up to date.

From the ground up, Predict! has been designed to be your simple and easy to use, risk management centre. From here, you can manage your entire risk network, individual projects, multiple projects, operational, strategic, corporate risks and more within just three key screens:

- • **Dashboard**

- • **Risk and Action Lists**

- • **Risk Detail**

Predict! Software Suite
ISO 31000 Compliant
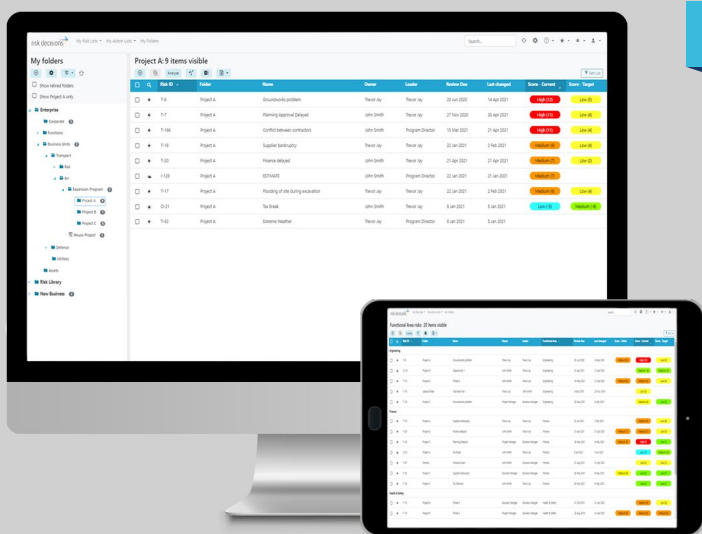

Manage your risks in just 3 Key Screens

01 Dashboard

Predict! Risk Controller shifts your team's approach to risk and action management from reactive to proactive and enables you to address the most pressing risks in a timely manner. The home screen welcomes you with your Personal Dashboard, the Folder Dashboard and your list of favourited and recently viewed risks and folders.

Through your Personal Dashboard, you can quickly identify and drill down to which risks and, most importantly, which actions, need your attention and speedy response. Through the Folder Dashboard, you can browse the risks and actions you are responsible for, and review their status and proximity.

Message-driven prompts encourage you and your team to engage in proactively managing risks and actions.
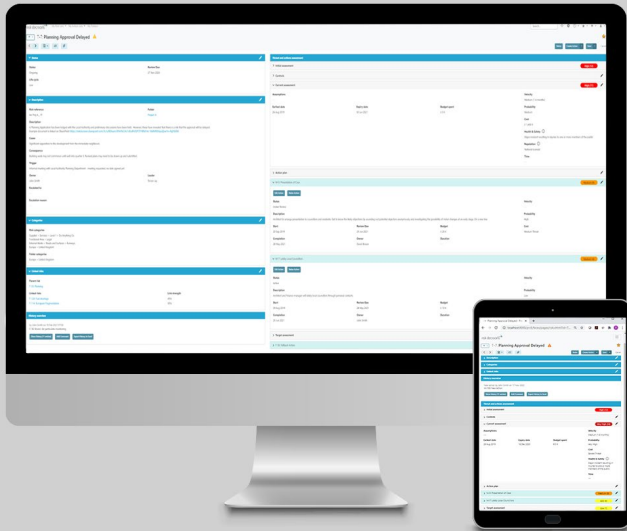

02 Risk and Action Lists

Gain clear, transparent and full visibility of the most significant risks across your business from any perspective you choose, without the need for manual selection of the top risks, or labour-intensive merging of out-of-date spreadsheets.

From here, you can view risks associated with the entire organisation or portions of it, individual projects or custom lists to include multiple projects and areas of interest.

Key features of risk lists include an entire indexed and searchable database, bulk updates, drag and drop, aggregation, individual and collective scalable scoring and more.

By applying the powerful integrations available in Predict!, users can perform Monte Carlo risk analysis with *Predict! Risk Analyser**, export to Microsoft Excel, customise reports using *Predict! Risk Reporter** and generate top-down visualisations with *Predict! Risk Visualiser** - all from the list screens.

03 Risk Detail

Having the power to align Predict! to the needs of any area of your business, from mini to mega projects, business units, contracts and operations, supports engagement in risk across your organisation.

Drill into Risk and Action Lists to access a fully configurable view of all the details behind any risk. Customise field visibility, labels, headings and help text to immediately see the status of your risk and what actions you need to take.

View and update initial, current and target risk assessments, controls, risk velocity, risk window and more; add as many cost, time, reputation, safety and other impacts as you wish.
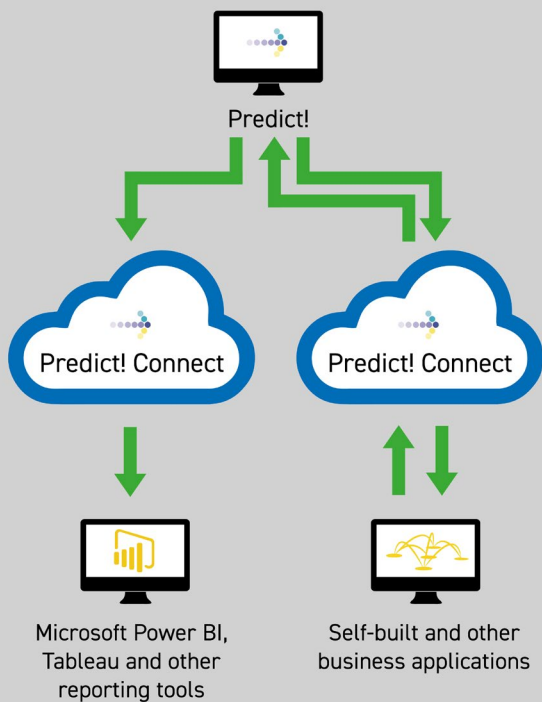

Action Strategy & Detail

Risk Assessment

"Predict! is so easy to use, I could take someone off the street and have them using it in 10 minutes"
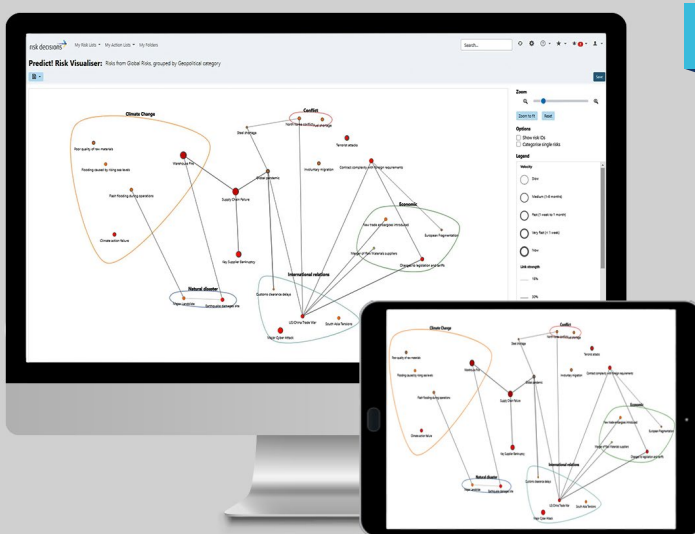

Predict! Connect

Predict! Connect, our two-way REST API, is licenced free of charge with Predict! Risk Controller and enables you to:

- extract risk and action information from the Predict! database into Common Data Environments

- access Predict! data for use in reporting tools such as Microsoft Power BI

- view, create and update Predict! risk and action data through web pages or self-built applications

- link Predict! to and from your favourite business applications (subject to appropriate connector availability).

Predict! Connect requires standard user login access and complies with the Predict! security model.

Additional Modules

Predict! Risk Visualiser

Directly accessible from any Risk List, Predict! Risk Visualiser allows you to take a view across your entire risk network, business unit, single or multiple projects, in a top-down interactive format.

Providing more visual information than your typical static risk register, Predict! Risk Visualiser shows you:

- How your risks are grouped, based on the category of your choice

- How these risks are linked and the strength of their connections

- The velocity at which the risk might impact your organisation

Predict! Risk Visualiser's interactive capability is the perfect tool to open up risk conversations across your organisation.
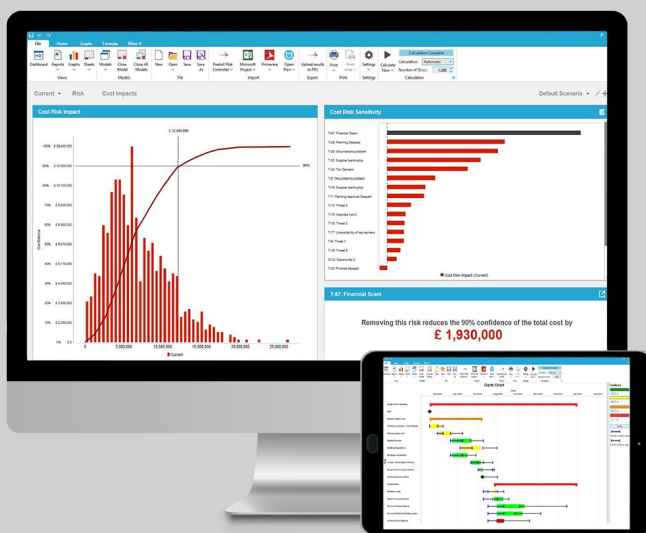

Predict! Risk Reporter

As busy managers, you need to make data-driven decisions quickly. Reports with clear pointers to real-time risk information from across your organisation are essential.

Predict! Risk Reporter empowers you to create custom report templates that take your business forward.

Shareable with users via standard Predict! Risk Controller report menus, providing consistent reporting, encouraging wider user engagement.

Different functions, programs, and other stakeholders may have distinctive needs. You can meet these by modifying any existing template, or by creating a completely new one. If you don't have report writing specialists or the time to do this, we offer a custom Report Development Service to do it for you!

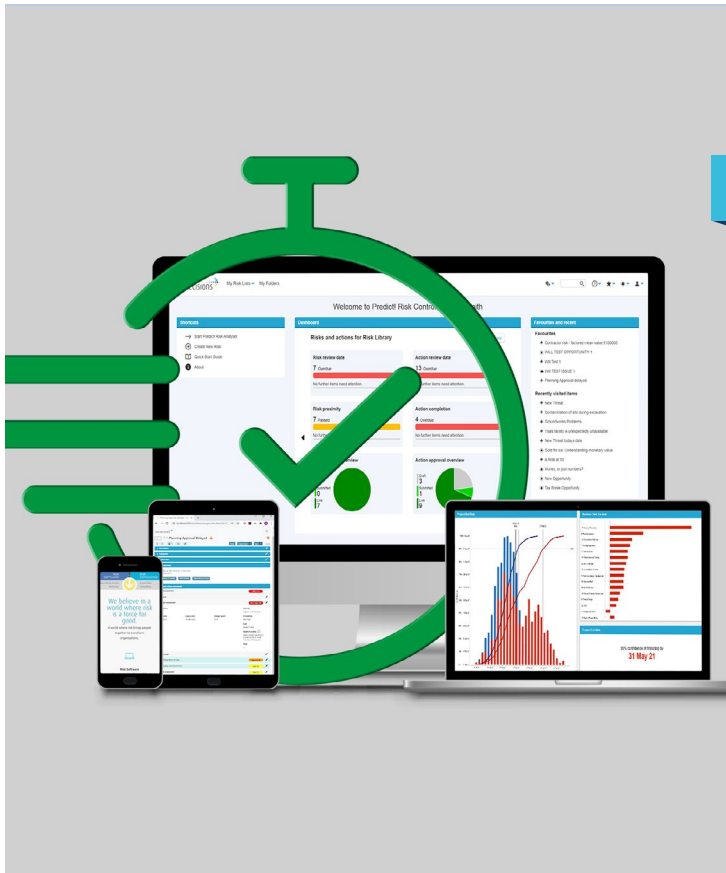

Predict! Risk Analyser

Projects operate in an ever-changing and evolving environment. As the future unfolds, be confident you can handle uncertainty and are ready to make decisions quickly.

Predict! Risk Analyser gives you that edge, enabling you to reliably predict how well your schedule and cost will survive changes in project estimates, constraints and assumptions. Launched directly from any Predict! Risk Controller Folder or Risk list, you can analyse the impact of individual and groups of risks and the cost benefit of different mitigation strategies. Use the unique interactive dashboard to explore scenarios, then write results back to Predict! Risk Controller for insightful trend reporting.

Whether you're bidding for a contract, determining contingency, or require assurance that your deliverables are on track, Predict! Risk Analyser provides vital information for sound risk-based decision making.

Predict! Risk Analyser is available as an integrated and standalone option; both are compatible with Microsoft Project, Primavera and Open Plan scheduling software.

Predict! Rapid Deployment

We help you get Predict! up and running, quickly, effectively and efficiently. Our rapid deployment methodology for rolling out Predict! Risk Controller draws on decades of experience, successfully implementing Predict! securely across large organisations around the world. We work with you to configure Predict! to match you risk management process and prepare your core risk team to roll out Predict! across your organisation. This includes a quick start guide tailored to your configuration and a user briefing for you to get risk management rolling across your user base.

As time passes, it's easy to update your configuration using Predict!'s modern, streamlined administrator interface. Our low cost of ownership model helps you maximise your return on investment in risk management using Predict!.

Our dedicated customer care team has a reputation for being friendly, responsive and knowledgeable. They answer specific 'how do I?" questions on the Predict! software suite as well as more general risk management questions.
