NUCLEAR-POWERED SUBMARINE MASTERCLASSES

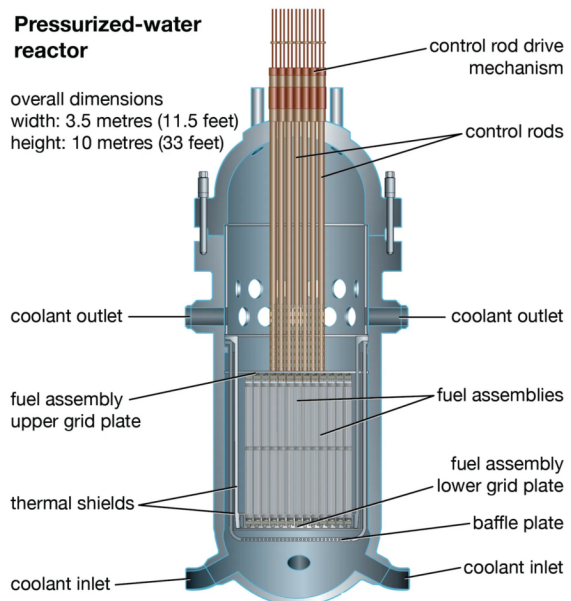

The first part of our nuclear-powered submarine (NPS) Masterclass aims to provide enough information for attendees to return to their workplace with an enhanced understanding of nuclear-powered submarines, what topics to be aware of, and what questions to start asking about. It explains how to better prepare yourself for the introduction of Australian nuclear-powered submarines. In a morning, you will learn from an ex-nuclear submariner about how they operate, what the operational differences are between nuclear and conventional submarines, learn new terminology and understand what it means, and learn how to achieve a social licence to operate them.

The second part of the NPS Masterclass delivers a deeper dive into the supporting ecosystem. It provides you with a better understanding of nuclear-powered submarines and how building, operating, and sustaining them will be integrated into an Australian context. In an afternoon, learn about Australia's existing nuclear foundations, the global rules and regulations that are already in force, how to upskill the Australian workforce, and how nuclear safety and security are applied in support of nuclear-powered submarines.

Nuclear Consultancy Group

Our signature initiative is the Nuclear Consultancy Group designed to accelerate AUKUS by providing expertise to Australia.
