CO-OPERATIVE EDUCATION PROGRAM

CO-OPERATIVE EDUCATION PROGRAM

Future-proof your industry with a pipeline of engineering talent

Monash Engineering Co-operative Education Program (Co-op) is a flexible and cost-effective paid internship program. It provides premium access to Australia's leading engineering talent* and a structured, supported recruitment pathway.

The Co-op enables you to act as a co-educator and further guide and support students through their internship and potentially into their early career.

This provides the opportunity to evaluate potential new hires over an extended period, and determine their organisational fit.

The program accepts applications from undergraduate students from all specialisations. They are pre-screened, trained in job-ready skills, and ready to make an impact in your business.

ACHIEVE MORE FOR YOUR BUSINESS

Employing a student through the Co-op program provides your organisation with the opportunity to:

- Access Australia's top engineering students*
- Employ a job-ready student to complete priority projects
- Actively train and develop your future workforce pipeline
- Partner with Australia's #1 ranked University for Engineering*
- Provide development opportunities to students through training and mentorship

*2023 Times Higher Education 2023 World University Rankings by subject

“It has been a pleasure working with our Co-op student over the past few months. She has integrated easily into our team despite the challenges of COVID-19 and has approached every task with a positive mindset, developing skills in structural modelling, applying codes and standards in design and reading engineering drawings. We are pleased to be involved in developing the future engineers of our industry and look forward to supporting more interns in the future.”
